

Appendix A: Summary of EPA's Superfund Remediation Process

The following is an outline and references for the EPA's Superfund remedial process. This is a condensed version of [EPA's Superfund Web Page](#) (Ref. A.1). See EPA's web site for more details by clicking on the titles of each section below. Also, EPA has a general guidance on the Superfund process, [CERCLA Superfund Orientation Manual](#) (Ref. A.2).

1. [Preliminary Assessment/Site Inspection \(PA/SI\)](#)
The PA and SI are used by EPA to evaluate the potential for a release of hazardous substances from a site. A PA is a limited-scope investigation performed on every CERCLIS site, see [Guidance for Performing Preliminary Assessments Under CERCLA](#) (Ref. A.3). A SI identifies sites that enter the National Priorities List (NPL) Site listing process and provides the data needed for Hazard Ranking System (HRS) scoring and documentation. The EPA publication [Guidance for Performing Site Inspections Under CERCLA, Interim Final](#), (Ref. A.4) provides more information on conducting SIs. Sites with a HRS score of 28.50 or greater are eligible for listing on the NPL and require the preparation of a HRS scoring package.
2. [Hazard Ranking System](#)
The HRS is the principal mechanism EPA uses to place uncontrolled waste sites on the NPL. For more information, please consult the EPA publications, [The Hazard Ranking System Guidance Manual](#), Interim Final, (Ref. A.5) and the December 14, 1990 *Federal Register*, Hazard Ranking System; Final Rule (55 FR 51532) (Ref. A.6).
3. [NPL Site Listing Process](#)
Sites are listed on the NPL upon completion of HRS screening, public solicitation of comments about the proposed site, and after all comments have been addressed. Sites are first proposed to the NPL in the *Federal Register*. EPA then accepts public comments on the sites, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.
4. [Remedial Investigation/Feasibility Study \(RI/FS\)](#)
After a site is listed on the NPL, a RI/FS is performed at the site. The RI serves as the mechanism for collecting data to characterize site conditions; determine the nature of the waste; assess risk to human health and the environment; and conduct treatability testing to evaluate the potential performance and cost of the treatment technologies that are being considered. The FS is the mechanism for the development, screening, and detailed evaluation of alternative remedial actions. The EPA's

guidance is [Guidance of Conducting Remedial Investigations and Feasibility Studies Under CERCLA](#) (Ref. II.1).

5. [Record of Decision \(ROD\)](#)

The ROD is a public document that explains which cleanup alternatives will be used to clean up a Superfund site. The EPA's guidance is [A Guide to Preparing Superfund Proposed Plans, Record of Decision, and Other Remedial Selection Decision Documents](#) (Ref. A.7).

6. [Remedial Design/Remedial Action \(RD/RA\)](#)

The RD is the phase in cleanup where the technical specifications for cleanup remedies and technologies are designed. The RA follows the remedial design phase and involves the actual construction or implementation phase of the site cleanup. The EPA's guidance is [Remedial Design/Remedial Action Handbook](#) (Ref. A.8).

7. [Construction Completion](#)

EPA has developed a construction completions list (CCL) to simplify its system of categorizing sites and to better communicate the successful completion of cleanup activities. Sites qualify when any necessary physical construction is complete, whether or not final cleanup levels or other requirements have been achieved; EPA has determined that the response action should be limited to measures that do not involve construction; or the site qualifies for deletion from the NPL. The [Closeout Procedures for National Priorities List Sites](#) (Ref. A.9) provides guidance on achieving the construction completion milestone.

8. [Post Construction Completion](#)

The goal of Post Construction Completion activities is to ensure that Superfund response actions provide for the long-term protection of human health and the environment. EPA's Post Construction Completion activities also involve optimizing remedies to reduce cost and/or increase effectiveness without sacrificing long-term protection of human health and the environment. The EPA's guidance are [Superfund Post Construction Completion: An Overview](#) (Ref. A.10) and [Superfund Post Construction Completion Activities](#) (Ref. A.11).

9. [Operation and Maintenance \(O&M\)](#)

O&M is an important component of a Superfund response to ensure that the remedy performs as intended and to protect the integrity of the selected remedy for a site. Actions range from maintaining engineering containment structures (e.g., landfill covers) to operating ground water remediation systems. Generally, O&M are the responsibility of the Potentially Responsible Parties, States, or other Federal agencies. See

EPA's guidance, [Operation and Maintenance in the Superfund Program](#) (Ref. A.12).

10. [NPL Site Deletions](#)

Deletion of sites from the National Priorities List (NPL) may occur once all response actions are complete and all cleanup goals have been achieved. EPA has the responsibility for processing deletions with concurrence from the State. Deleted sites may still require five-year reviews to assess protectiveness. See EPA's guidance, [Closeout Procedures for National Priorities List Sites](#) (Ref. A.13).

Appendix B: State and EPA Contacts for Contaminated Sediment Assessment and Remediation (March 2, 2007)

Alabama

Sonja Favors
Environmental Engineer II
Hazardous Waste Branch
AL Dept. of Environmental Management
P.O Box 301463
Montgomery, AL 36130-1463
PH: (334) 279-3067
FX: (334) 279-3050
